

Website Handover Guide

LIVE AND OPERATIONAL Website, HTTPS, enquiry mailer and Google Search Console are connected.

1 Key links

PUBLIC WEBSITE

certiplan.co.uk

The official customer-facing website.

CLIENT LOGIN

[Digital Logbook](#)

Linked from the website header.

2 Ownership and services

SOURCE CODE github.com/certiplan/certiplan-premium

HOSTING **GitHub Pages - main branch**

DOMAIN AND DNS **Cloudflare - certiplan.co.uk**

BUSINESS EMAIL **Info@certiplan.co.uk**

SEARCH REPORTING **Google Search Console - certiplan.co.uk**

3 How publishing works

1 Edit

Update the website files

2 Publish

Commit to the main branch

3 Deploy

GitHub Pages builds automatically

4 Live

certiplan.co.uk updates

CONTACT FORM DELIVERY

Website form > Google Apps Script > Info@certiplan.co.uk

Sender: CertiPlan Website Leads (no-reply) | Subject: New enquiry - Customer Name

Use the green Reply to Customer button inside each message to answer the enquiry.

1 Website updates

- All public website files are stored in the GitHub repository owned by the certiplan account.
- Publishing to the main branch triggers GitHub Pages automatically. Most updates appear within a few minutes.
- The custom domain and HTTPS setting are attached to GitHub Pages. Do not remove the CNAME file or custom domain setting.

2 Domain and DNS

- Registration and DNS are managed in Cloudflare. Renewal and payment details are handled there.
- The active Cloudflare nameservers are quinton.ns.cloudflare.com and zara.ns.cloudflare.com.
- Do not change DNS records unless the website host, email provider or digital logbook service is changing.

3 Enquiry email system

- The public form posts securely to the CertiPlan Enquiry Mailer project in Google Apps Script.
- Messages arrive at Info@certiplan.co.uk from a generic no-reply identity named CertiPlan Website Leads.
- The normal Gmail Reply action is not used. Click the green Reply to Customer button inside the message.
- After editing Apps Script: Deploy > Manage deployments > Edit > New version > Deploy. Keep the existing URL.

4 Google visibility

- Google Search Console is verified for certiplan.co.uk. Indexing has been requested.
- The sitemap is live at certiplan.co.uk/sitemap.xml and was submitted successfully.
- Search placement is not immediate or guaranteed. Monitor Performance and Page indexing in Search Console.

5 Account security checklist

- Enable two-factor authentication on GitHub, Cloudflare and Google.
- Keep recovery email addresses and phone numbers current.
- Never send passwords, recovery codes or API keys by email or chat.
